Answer: Constant current bias circuit supplies constant emitter current. It also provides very high source resistance since the AC equivalent of the DC current source is ideally an open circuit. Q.15. What is the use of level translators? Answer: Because of direct coupling, dc level at the emitters rises from stage to stage. This increase dc level tends to shift the operating point of the succeeding stage and therefore limits the output voltage swing a may even

Analog Circuits Interview Questions and Answers

Answer: A linear integrated circuit is a solid state analog device characterized by a theoretically infinite number of possible operating states. It operates over a continuous range of input levels. Within a certain input range, the amplification curve of a linear IC is a straight line i.e. the input and output voltages are directly proportional.
