Apex uses this method to determine equality and uniqueness for your objects. For more information on providing an equals method, see [Using Custom Types in Map Keys and Sets](#). If the list contains String elements, the elements are case-sensitive. Two list elements that differ only by case are considered distinct.

[List Class | Apex Developer Guide | Salesforce Developers](#)

Map keys and values can be of any data type—primitive types, collections, sObjects, user-defined types, and built-in Apex types. Uniqueness of map keys of user-defined types is determined by the equals and hashCode methods, which you provide in your classes.
