Oliver Twisted

Please, Sir, can

I have some more
& centring?

Grand mean

centring is

really easy: we

can simply use

the compute

command that we

encountered in

Online Library

Chapter 10

the book. First, we need to find out the mean score for callous traits and gaming. We can do this using some simple descriptive statistics.

**Chapter 10:

Chapter 10

Moderation

Mediation And

More Regression

Moderation is a way to check whether that third variable influences the strength or direction of the

Online Library

Chapter 10

relationship
between an
independent and
dependent
variable. An
easy way to
remember this is
that the
moderator
variable might
change the
strength of a
relationship
from strong to

Online Library

Chapter 10

Moderate, to
nothing at all.
It is almost
like a turn dial
on the
relationship; as
you change
values of the
moderator, a
statistical
relationship
that you
observed before
might dissolve

Online Library

Chapter 10

away.

Mediation And

What is the

difference

between

moderation and

mediation ...

1 What are

Mediation and

Moderation?

Mediation

analysis tests a

hypothetical

causal chain

Online Library

Chapter 10

where one variable X affects a second variable M and, in turn, that variable affects a third variable Y . Mediators describe the how or why of a (typically well-established) relationship between two

Online Library

Chapter 10

other variables and are sometimes called intermediary variables since they often describe the process through which an effect occurs.

11. Moderation, mediation and multicategory predictors ...

Mediator. a variable that reduces the size

Online Library

Chapter 10

and/or direction of the relationship between a predictor variable and an outcome variable (ideally to zero) and is associated statistically with both.

Moderation.

Moderation

Online Library

Chapter 10

occurs when the relationship between two variables changes as a function of a third variable.
